

Prepaid SIM Cards for Cellular Gateways and Interfaces

Description

Prepaid SIM cards with Voice over LTE (VoLTE) service are available for Talkaphone's 4G LTE Cellular Gateway, VoLTE Retrofit Kit, and 4G LTE Cellular Interface.

The VoLTE service connects a Talkaphone analog Call Station to the public telephone network and enables dialing to a public telephone number.

IMPORTANT NOTES:

¹ ETP-CGW-4G-GSM-V2, ETP-CGW-4G-GSM, ETP-CI-4G-GSM, and VoLTE service **do not currently support E911 and cannot dial 911.**

² All programming, diagnostics, and identification of the ETP-120/ETP-500/ETP-520 Series Analog Call Stations are accomplished through the transmitting and receiving of in-band DTMF signals. Cellular transmissions and cellular networks may interfere with and distort these tones. As a result of these irregularities, Model ETP-TAL-1, Talk-A-Lert Polling and Listening may not function as intended and, therefore, may not be appropriate in that application or environment.
